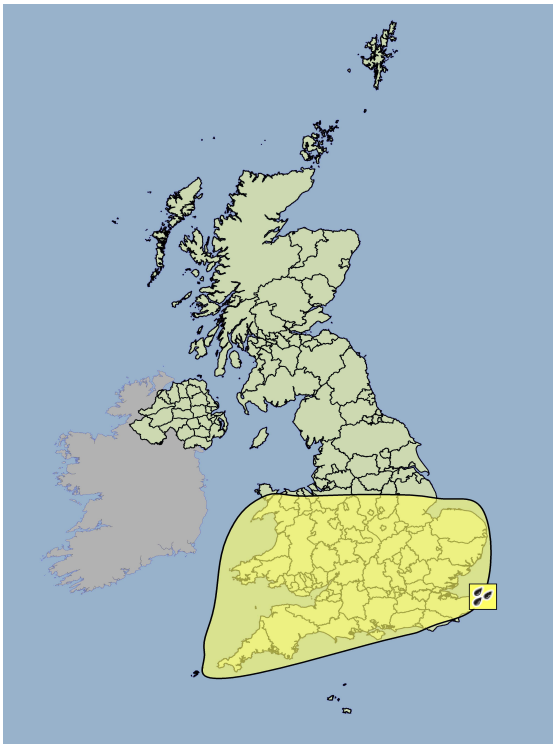
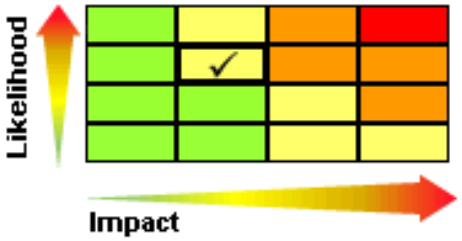
# National Severe Weather Warning Service





**Chief Forecasters Assessment**
A slack area of low pressure remains aligned across southern Britain on Friday and Saturday, bringing with it moist and deeply unstable air. Daytime heating will assist the development of heavy showers and thunderstorms. These are likely to become slow-moving and in some areas organised into bands, with scattered localities receiving 15-20 mm of rain in an hour or less, and perhaps 40 mm in 2 or 3 hours. Hail and lightning will be additional hazards. As is the nature of showers, some places will escape the heavier downpours.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **05:45 on Fri, 27th Jun 2014** until **21:00 on Sat, 28th Jun 2014**

Heavy, thundery showers are breaking out and will become more widespread through Friday afternoon across Wales, southern England, East Anglia and the Midlands. Hail and lightning will accompany some of these downpours, but with an improvement likely later across parts of southeast England. Following a lull in activity overnight, further slow-moving thundery downpours will develop during Saturday. These are less likely than on Friday across north Wales and the north Midlands, with the greatest risk increasingly towards the south of the warning region later in the day.

This is an update of the warning first issued on Thursday, with the northern limit extended further north across Wales and the Midlands for Friday afternoon.

The public should be aware that the downpours may lead to localised surface water flooding and potential disruption to transport and outdoor events.
